# SGreports Icecast ATH (Aggregate Tuning Hours)

This tutorial goes over creating a report to find the ATH for Icecast with SGreports. If you have any questions, please contact support@streamguys.com.

Please note: The accuracy of your reports depends on how well you filter for your target population (e.g. your audience).
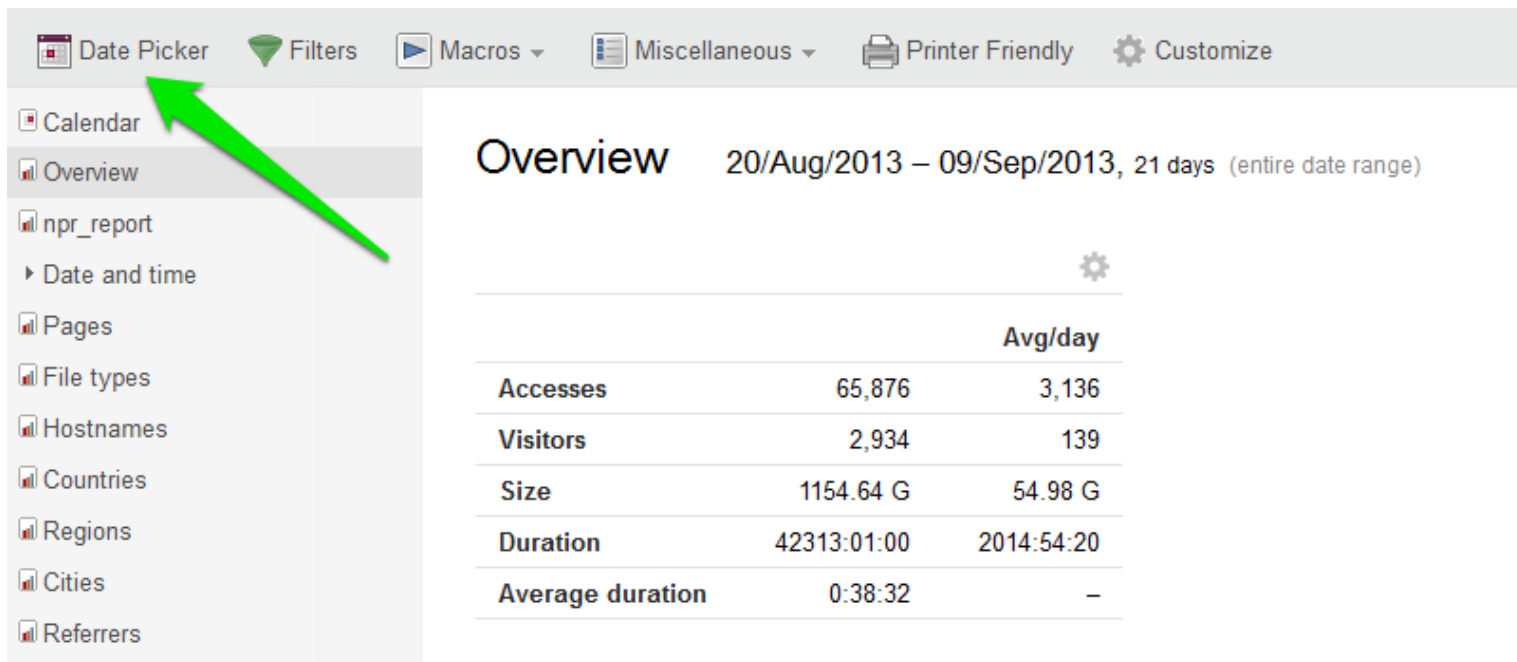

For instructions on filtering, please see the [Filters](#) section of [SGreports How-Tos (Downloadable PDFs)](#).

To have all announcements, prerolls, and Adswizz insertions filtered out as well, please contact support@streamguys.com about setting up a SGreports playlist profile.

Log into your SGreports manager, and select your respective Icecast profile.

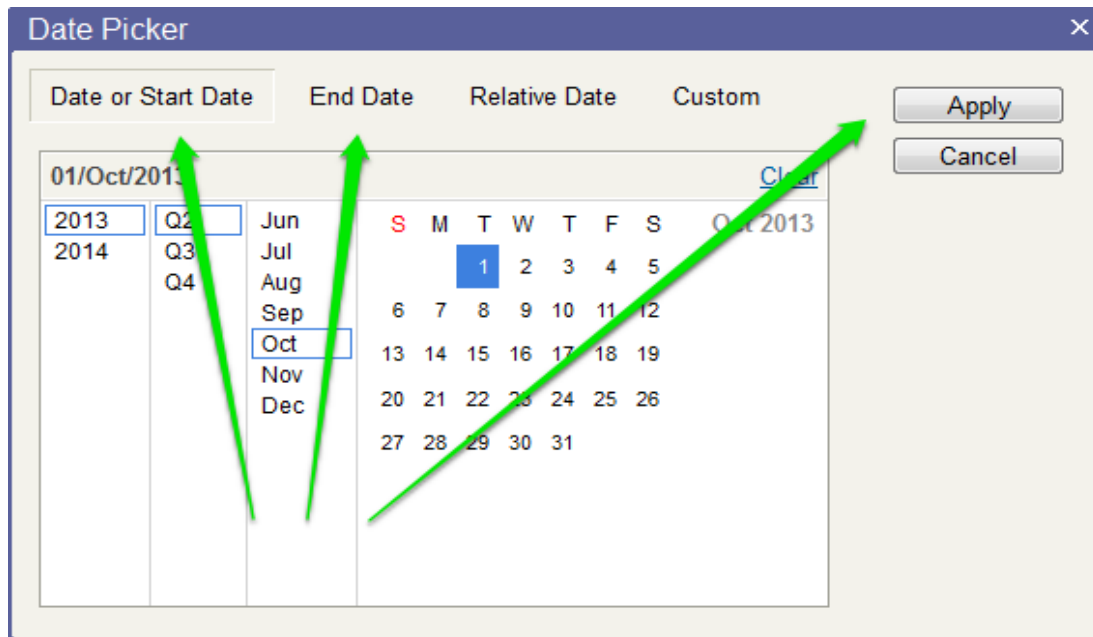

This will take you directly to the Overview section. Click the Date Picker on the top left to select the date-range for the ATH.

In the Date Picker dialog box, select the beginning and end date for your ATH report:

1. Click on "Date or Start Date" and select the beginning date for the date-range. *
2. Click on "End Date" and select the last date for the date-range. *
3. Click the Apply button.

Please note: Each field must have a value.

You'll now see the Overview report for your selected date-range. The Duration is your ATH.

Overview   20/Aug/2013 – 09/Sep/2013, 21 days
